

The social mission of our centre is to academically examine the influence of IPE and CP on the happiness of individuals, organizations, and societies from the perspectives of both health/social care workers and service users, and to disseminate the findings as common knowledge.

In this session, speakers introduced their IPE research network in Asia, and the details of recent research initiatives on psychological safety.

During the group work session, participants presented their action plans on how they would improve IPE in their own Institutions. They discussed practical strategies, identified possible challenges, and proposed solutions to promote interprofessional collaboration in their workplace and academic settings.
